

## **MAINTENANCE AND CARE OF FIBO WATERPROOF PANELS AND PROFILES**

- 1. Wipe clean with a damp cloth using a non-abrasive liquid cleaner**
- 2. Do not use an abrasive cleaner. e.g. Cif or Brillo pads**
- 3. Stubborn stains may be removed using a vinegar based cleaner.**

Fibo panels are very easy to clean and there is virtually no maintenance required. Clean on a regular basis with just a wipe down using a soft cloth with soap and water or a non abrasive liquid cleaner. Do not use shower clean "wash & go" type products or limescale removers such as Viakal as the acidic content of some of these products can cause damage or discoloration over time. Do not allow bleach, abrasive cleaners, paint stripper, white spirit or toilet cleaner to come into contact with the panels. Methylated spirit can be used on stubborn stains however. The sealant should also be cleaned often to prevent mould growth. If using silicone sealant, which is not recommended, regular checks of exposed sealant should be made and this should be replaced on a regular basis. This step should not be necessary if using a permanent polymer sealant as recommended. Steam cleaning machines are NOT suitable for use with Fibo panels.
