

Discover the Vito Fire Panel: The ultimate fire-resistant solution

EXCEPTIONAL FIRE PROTECTION - VERSATILE AND STYLISH

The Vito Fire Panel is specifically designed for indoor use in dry areas. Its unique combination of fire safety, durability, and easy installation makes it stand out from the competition.

The Vito Fire Panel offers top-tier fire protection with its B-s1, d0 classification. It contributes very little to fire, produces minimal smoke, and does not form burning droplets. EI30 can be achieved easily by using regular wooden studs (2x4") and mineral wool in combination with Vito Fire Panel.

Built to endure, the Vito Fire Panel has a robust surface ideal for tough indoor environments. Its eco-friendly design reduces material use and lowers the carbon footprint with a simplified single back-wall structure.

Installing the Vito Fire Panel is quick and easy, thanks to its innovative click-lock mechanism, which create nearly invisible joints. This efficient setup saves time and labor, and the panel requires no post-installation finishing, making maintenance simple.

WHY CHOOSE VITO FIRE PANEL

- High fire safety with B-s1, d0 classification
- EI30 rating ensures excellent Fire Resistance
- Long-lasting surface that withstands wear and tear
- Quick and straightforward with click-lock mechanism
- Hidden fastening with screws
- Low Maintenance
