

Discover the Fibo Fire Rated Panel: the ultimate fire-resistant solution

EXCEPTIONAL WATER AND FIRE PROTECTION - VERSATILE AND STYLISH

The Fibo Fire Rated Panel is specifically designed for indoor use in dry areas. Its unique combination of water and fire safety, durability, and easy installation makes it stand out from the competition.

The Fibo Fire Rated Panel offers top-tier water and fire protection with its B-s1, d0 classification. It contributes very little to fire, produces minimal smoke, and does not form burning droplets.

EI30 can be achieved easily by using regular wooden studs (2x4") and mineral wool in combination with Fibo Fire Rated Panel.

Built to endure, the Fibo Fire Rated Panel has a robust surface ideal for tough indoor environments. Its eco-friendly design reduces material use and lowers the carbon footprint with a simplified single back-wall structure.

Installing the Fibo Fire Rated Panel is quick and easy, thanks to its innovative clicklock mechanism, which create nearly invisible joints. This efficient setup saves time and labor, and the panel requires no post-installation finishing, making maintenance simple.

WHY CHOOSE FIBO FIRE RATED PANEL

- High fire safety with B-s1, d0 classification
- EI30 rating ensures excellent Fire Resistance
- Long-lasting waterproof surface that withstands wear and tear
- Quick and straightforward with click-lock mechanism
- Hidden fastening with screws
- Low Maintenance
